

AC Schnitzer ACS4 Roadster

AC[®]
SCHNITZER
beyond the standard.

The special enthusiasm resulting from countless race victories still characterises the innovative force of AC Schnitzer products.

Efficient Performance – Technology Transfer from Motorsport to the Road.

Back in the 1960's, the Schnitzer brother celebrated Touring Car successes in BMW's on almost every race tracks in the world. Since the outset, we at AC Schnitzer have used these experiences in motorsport. Today the Nürburgring is still the AC Schnitzer test track. Here all components must prove their performance potential, reliability and efficiency in protecting the environment under

the harshest race conditions. Only when the performance upgrade is achieved at no cost to fuel consumption and emission values are the parts included in the AC Schnitzer special accessory range. A combination of contemporary suitability for everyday road use with the dynamics of motorsport – Efficient Performance by AC Schnitzer.

Custom aerodynamics with front spoiler, front grille, sports wings with integral flashers and the Chromline set emphasise the masculine lines of the striking front end.

The Nürburgring, known as the "Green Hell" for racing drivers and motorsport fans, is still the right test track for all AC Schnitzer product developments.

AC Schnitzer ACS4 – A Legendary Roadster in Sports Dress.

With its classic elongated form, the BMW Z4 paints a striking picture on our roads even in standard form. Here too the body designers at AC Schnitzer, with their experienced eye and pronounced sense of sporting elegance, have exploited the optimisation potential of the car. Using high quality flexible PU Rim, they have now produced aerodynamic components which further emphasise

the masculine traits of the roadster.

“The sports wing with integral air outlet openings and chromed deflectors is not only a visual highlight”, comments Michele Viandante, Chief Designer at AC Schnitzer, describing his latest design. „The front brake cooling is also perceptibly optimised.“ And the two-piece rear spoiler visibly highlights

the lines of the standard vehicle with striking accents when combined with the AC Schnitzer sports rear silencer.

Refinement in every detail: The two-piece rear spoiler and sports rear silencer with chromed Racing tail pipe trims (for Z4 23i, 30i and 35i) give the rear end the dynamics typical of AC Schnitzer.

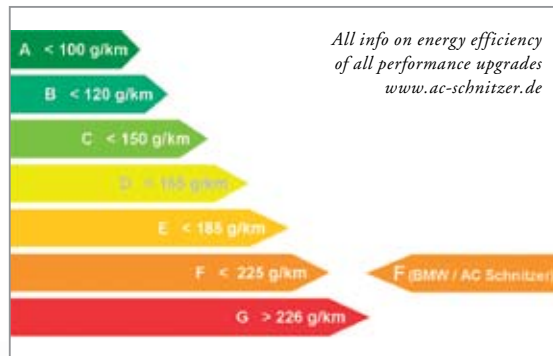

Racing Technology Defines New Limits for M-Technik.

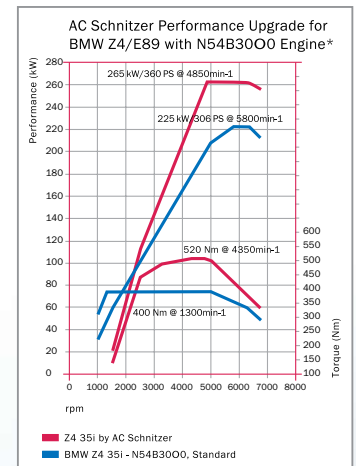

The sporting style of the M-Technik pack forms the optimum foundation for the motorsport-inspired visions of the AC Schnitzer engineers. Exploiting new dimensions in the performance potential of the automotive and suspension technology is a welcome challenge for them. The results are obvious in many ways. The aerodynamic components

exploit their potential with particular elegance, while the performance gain of 40 kW or 54 HP delivers a clear boost. The power gain is achieved while retaining the same CO₂ emissions and fuel consumption in the RL 80 / 1268 test cycle in the present version. So driving pleasure is increased with a clear conscience

High performance athlete in the best form: With chrome grille, carbon front spoiler and sports wings with integral air outlet openings and chromed deflectors by AC Schnitzer.

Energy efficiency class BMW Z4 35i and Z4 35i by AC Schnitzer.

Performance Upgrade with Full Warranty.

As well as perfect design and high performance potential, the product quality of all AC Schnitzer components is a topic particularly close to our heart. All aerodynamic components are made of high quality PU Rim or carbon, and usually offer a better fit accuracy than the standard car. For performance upgrades, AC Schnitzer offers a two-year warranty from the date of first

registration up to a distance of 100,000 km on all assemblies excluded from the BMW warranty. For its own components, AC Schnitzer even offers a warranty extension of up to three years from first registration. So the Z4 by AC Schnitzer - with or without M-Technik pack - retains its value and becomes a reliable form of individual and sports- exclusive driving.

Acoustic and visual highlight: The AC Schnitzer sports exhaust system with stainless steel rear silencer and chromed tail pipe in Racing design.

Suspension Technology – Another Masterpiece by AC Schnitzer.

Individually matched:
The AC Schnitzer racing suspension is fully height-adjustable and allows compression and rebound adjustment;
AC Schnitzer Type IV one-piece rim in silver or bicolor, 18" and 20";
AC Schnitzer Type VI one-piece rim in bicolor, 18";
AC Schnitzer Type VIII one-piece or forged rim in bicolor, 19".

Transferring the power potential of the engine to the road optimally at all times is the task of the suspension components from AC Schnitzer. Individually developed for each vehicle, the AC Schnitzer racing suspension guarantees an optimum balance of driving comfort and more sporting dynamics. In conjunction with lowering by approx. 30 mm - which can also be achieved by the suspension spring kit alone - it visually underlines the sporting ambitions of the roadster.

“Thanks to the optimum matching of the suspension, the power reserves of the roadster can now be properly enjoyed even in road traffic”, says Manfred Wollgarten, describing his latest development. In combination with the innovative alloy and racing rims in three different AC Schnitzer styles, sizes 18" - 20", the overall concept is one of sophisticated high quality.

AC Schnitzer Interior Provides That Authentic Motorsport Feeling.

With a few subtle, elegant accessories from AC Schnitzer, the sporting-dynamic driving feeling can be perceptibly enriched with an authentic motorsport atmosphere. Aluminium cover for iDrive, gear knobs in leather, Black Line or with digital gear display, foot rest and pedal set in aluminium and foot mats of high quality velours – all components combine to make the motorsport world in the Z4 by AC Schnitzer an exclusive experience.

In regular high speed tests by the trade magazine „Auto Bild sportscars“ in Nardo, South Italy, a modified road-legal Z4 sDrive 35i by AC Schnitzer impressively proved its performance potential with a speed of 303.1 kph.

Exclusive interior components:

AC Schnitzer aluminium cover for iDrive system controller, aluminium gear knob in Black Line, illuminated leather gear knob, gear knob with digital gear display, aluminium foot rest and pedal set, and velours foot mats with AC Schnitzer logo.
